2006

Welcome to Fedco Bulb's 22nd co-operative flowerbulb and Maine-grown garlic pre-order.

We are pleased to offer low prices on quality flowerbulbs. Nearly all our bulbs are topsize (except where noted) and are nursery-propagated from commercial stock. Many big box stores and large catalog companies may sell bulbs for less, but they usually offer smaller and cheaper versions. Larger bulbs result in larger flowers and more vigorous plants. We encourage you to compare values, including bulb size, price, shipping and volume discounts.

We offer over 100 varieties of tulips and over 50 of narcissus in addition to more than 100 others including crocus, hyacinth, iris, allium, muscari, et alia.

For the first time we are offering a selection of jumbo-size bulbs in hyacinths and mid-season tulips. Also among the **NEW!** items this year are amaryllis 'Aphrodite' and 'Pink Nymph', Organic Jumbo Crocus Mix, 'The Organic Narcissus' mix, 'Golden Ducat', 'Mountain Dragon', *Tulipa clusiana*, 'Flaming Purissima', 'Dordogne', 'Florosa' and 'Lambada', and two books. Recent customer requests yielded narcissus 'Rijnfeld's Early Sensation' and "more Lily-flowering tulips, please!" 'Marilyn' and 'Mona Lisa'.

Scintillating returnees (**BACK!**) include crocus 'Romance' and 'Snow Bunting', hyacinth 'City of Haarlem', Dutch Iris 'Bronze Queen', narcissus 'White Lady', and tulips 'Coleur Cardinal' and 'Elegant Lady'.

Especially affordable items (✦$✦) include Dwarf Iris 'Katharine Hodgkins', narcissi 'Flower Record', 'February Gold' and 'Jack Snipe', *Muscari* 'Valerie Finnis', *Scilla bifolia* 'rosea', and *Tulipa praestans* 'Unicum', 'Stresa', 'Red Parrot' and the Oxfords.

We have refined our selection of organically grown varieties. See next page for details and for our Maine-grown garlic growing pains. Also, we have highlighted a few *last chance* items to be dropped unless folks show more interest this year.

Color photos on our website provide a look beyond words for many of our listings. You may also place your order online. Over 20% of you did last year, nearly 25% of our volume.

Fedco Bulbs is a division of Fedco Seeds, a worker/consumer co-operative. Please let us know if you'd like our other catalogs. (Trees available in October; Seeds, supplies and seed potatoes in December.)

We welcome your input; write to us with your questions, comments and suggestions. Thank you.

Seed Garlic is grown in Maine on family farms. Since Fedco is small, and can support few growers, supplying any garlic at all this season will be a challenge. We are able to offer only two varieties of Maine-grown seed garlic and only in small sizes. Because one grower retired, one had a washout during last fall's record rainy planting season, one's crop had disease problems, and another had a brush fire on his beds this spring, we will list only Phillips and Russian Red. Let's hope the growing season allows for full growth and agreeable drying time at harvest. A number of growers are building up stock of old and new varieties, but 2007 is the earliest we will see results.

German Extra-Hardy Garlic - *Allium sativum* subs. *ophioscorodon* - Rocambole. Grower retired. New supplier building up seed stock. *Not available in 2006.*

Phillips Garlic - **Organic** - *A. s.* subs. *ophioscorodon* - Molly Thorkildsen and Will Bonsall obtained this vigorous Rocambole from Raymond Rowe of Phillips, ME. Produces 6-8 large cloves per bulb. Flavor milder than Russian Red. Tan exterior skins and purple mottled clove coverings are substantial and make this an excellent keeper. We've had reports of bulbs keeping more than a year. Large topset bulbils are good for cooking or propagating. Slow to emerge in spring, so don't be alarmed when these take an extra two weeks to appear. They catch up quickly and mature at the same time as the other varieties we offer. MOFGA-certified. 40-50 cloves/lb. 1# yields approximately 6#. Z3-8. *Limited supply in 2006.*

1001: ½#/$9.00

Russian Red Garlic - **Organic** - *A. s.* subs. *ophioscorodon* - This Rocambole garlic has a stiff stalk, not braidable, but can be tied in bunches. Forms one ring of 5-8 large plump cloves around the stalk, with mottled burgundy paper. Great in the kitchen for daily use. Keeps well for about six months. MOFGA-certified. 50-60 cloves/lb. 1# yields approximately 6#. Z3-8. Rainy fall prevented planting; *limited supply. Limit: one 2# package per customer.*

1011: ½#//$9.00 1012: 2#/$31.00

Inchelium Red Garlic - **Organic** - *A. s.* subs. *sativum* - Braidable softneck. *Crop failure; not available in 2006.*

How to Grow Garlic

Prepare a well-groomed seedbed of rich compost or composted manure. Break the bulb into individual cloves.

Plant cloves 5-6" deep and 4-6" apart, mid to late October. (Time frames are for central Maine, Zone 4.)

Mulch with 4-6" of hay, leaves or straw.

****

In spring, pull back mulch from around the emerging garlic tips.

Top dress or foliar feed, and provide adequate moisture during the growing season to encourage the formation of larger bulbs.

Cut off the flower stalks, known as scapes, from Rocambole garlic as they curl around; eat them green, compost them, or dry them for winter arrangements. If you leave the stalks on, the underground bulbs may be smaller. You can harvest the top-set bulbils to plant in fall for fresh greens next spring or bulbs in two years.

Poke around a few garlic bulbs in early August to check growth. Pull when 5-6 green leaves remain, before cloves begin to separate. Cure in a shaded airy place, 60˚-70˚, until dry. Do not field-cure.

Trim, clean, store in a cool dry place and enjoy through the long winter season.

Indoor Bulbs

lift our garden-deprived spirits during long northern winters. More satisfying than florist flowers because we see the leaves emerge and we get energized by the growing foliage. What a joy to watch the flower buds form, swell and finally burst open.

Many people stagger their indoor plantings to prolong the season. If you don't plant the bulbs right away, store them dry in a cool dark place.

Amaryllis - *Hippeastrum* hybrids - Hardy in Zones 9-10, and will grow outdoors there. Those of us in colder climes can plant these giant beauties indoors and enjoy blooms through the winter. Easy to grow, they will return year after year with simple care. Remove the pollen-bearing anthers for a longer bloom time and a neater tabletop. These jumbo bulbs will produce 2 or more stalks bearing 3-5 blooms on a stem.

Plant Amaryllis between October and May for flowering between December and June

If you do not plant your bulb immediately, store it in a cool area (50˚F.)

Before planting, place the bulb and its dangling roots in luke-warm water for several hours. Plant the Amaryllis in a pot slightly larger than the diameter of the bulb. Rocks added to the bottom of the pot will decrease tippiness and improve drainage. Use nutritious potting soil or compost, and cover the bulb up to the neck. Press the soil firmly around the bulb. Do not fill the pot with too much soil; leave enough room for watering.

In the first few weeks, water sparingly. After the leaves and bud develop, water more frequently. Direct sunlight and warm temperatures encourage proper growth. Amaryllis generally blooms 6 to 8 weeks after planting; the flowers last about 2 weeks.

Cut the stem close to the bulb after the flower fades. The long thin leaves will continue to grow. In mid to late summer, stop watering and let the leaves die back. By September or October, place the bulb in a cool dark place for 8 to 12 weeks to simulate dormancy.

Bring the bulb back to room temperature, begin watering, and its flowering cycle will begin again.

Indoor Narcissus or **Paperwhites** -

Narcissus tazetta - Ready for indoor growing, requiring no cold period. The longer you store bulbs before planting, the more quickly they bloom. October plantings bloom in four to six weeks; February plantings may take as little as two weeks. Plant in pebbles or marbles, keeping bulbs above the waterline, or plant in soil for longer-lasting flowers. Plant 5-8 bulbs in a container 6" in diameter for a full appearance. May need staking. Strong fragrance may fill your rooms.

'Chinese Sacred Lily' - *N.t.* var. *orientalis* - White petals with a yellow cup. Takes longer to root than other varieties, and has fewer flowers, but its wonderful sweet fragrance is worth it. Very popular in Victorian England, whence its misnomer comes. 16-20".

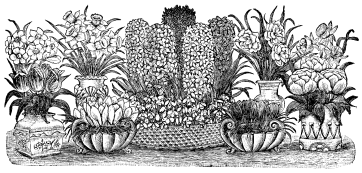
2153: 25/$24.00 2154: 100/$85.00



Forcing Bulbs for Indoor Blooms in Winter

Paperwhites and amaryllis are ready to plant and grow. All other bulbs must be cooled for a time to fulfill their winter dormancy requirements before they will produce foliage and flowers.

Planting: Choose a pot shallow and wide enough to hold several bulbs. Fill the pot halfway with stones or other coarse material, set the bulbs in root side down, then fill the container with fine stones, sand, light potting mix or other material until the bulbs are about two-thirds covered. The bulbs already contain all the nutrients needed to bloom one time, and too rich a soil may cause them to rot. Water up to the base of the bulbs. Or use a hyacinth glass: Fill with water to the base of the bulb, and do not let it get dry.

Forcing: After watering, cover the pot with plastic, punch a few holes for circulation, and place in the fridge (which works well because the temperature is consistent, but keep the bulbs away from fruit). Or, place them in a garage, unheated basement, root cellar, outdoors covered with 6-8" of leaves and earth, or other dark place at 35-40˚F. The bulbs will not be hurt by light frost, but they will be harmed by heat or a hard freeze.

# of weeks in:	cold storage	indirect light
Crocus	4-6	1-2
Galanthus, Scilla	6-7	1-2
Iris reticulata	7-8	1-2
Hyacinthus	10-12	2-3
Narcissus, Muscari	12-13	3-4
Tulipa	14-15	3-4

You can tell the bulbs are ready if you can see roots at the bottom of the pot, and leaf tips beginning to emerge. Bring the bulbs into a cool area (50-65˚F) with plenty of indirect light to encourage leaf growth. Too much heat at this point will cause premature flowering; do not place near radiators or wood stoves. Keep the soil moist, but do not overwater.

When 3-5" of leaf growth has appeared, bring the pots into direct light to encourage flowering. Once blooms have appeared, remove pots from direct sun to keep blooms from fading quickly.

Plant forced bulbs out in the garden in spring, or let them go dormant in their pots and plant them in fall. They will not force well a second time. The bulbs may not blossom until the 2nd spring after they were planted outdoors.

'Earlicheer' - Creamy white with a highly doubled center flecked with yellow; reminiscent of 'Cheerfulness', both in appearance and fragrance. As many as 20 florets per stem. We once dropped 'Earlicheer' because some folks said it didn't bloom for them; we listed it again because other folks said they were *lovely* and wouldn't we please bring them back. Try rooting them in a cool place if you had trouble. 12-14". 15-16cm.

2161: 5/$7.50 2162: 10/$12.50
2163: 25/$29.50 2164: 100/$97.00

'Grand Soleil d'Or' - Heirloom French variety with medium golden-yellow petals and orange cup. Light fruity scent. Takes a couple of weeks longer than 'Ziva' to bloom, about 4-6 weeks. 12-14". 15-16cm.

2171: 5/$5.75 2172: 10/$9.60
2173: 25/$22.00 2174: 100/$79.00

'Sheleg' - Late paperwhite, takes a week or two more to bloom than 'Ziva'. This variety has the biggest flowers and strongest stems of the paperwhites. All white, moderately fragrant. Also known as '**Jerusalem**'. 16-20". 16-17cm.

2181: 5/$5.40 2182: 10/$9.00
2183: 25/$21.00 2184: 100/$75.00

'Ziva' - Early paperwhite, one of the fastest to force (about 2 weeks) and the most floriferous. White flowers with strong musky spicy fragrance. Will not hold until late winter. 16-18". 16-17cm.

2191: 5/$5.40 2192: 10/$9.00
2193: 25/$21.00
2194: 100/$76.00

Outdoor Bulbs

In Waterville we are in USDA Zone 4. Fifty miles to the west in the mountains is Zone 3; fifty miles east on the coast is Zone 5. We offer only varieties which will grow in Maine. Local cold pockets, northern slopes, hills and lakes all affect your micro-climate, and may make the large-scale maps printed by the USDA inaccurate for your plot. Your cooperative extension service may have maps showing local zones. You can use rock walls and heavy mulch to shift conditions to your advantage.

Planning and Planting

Bulbs are easy to work with, very rewarding and forgiving. They look best planted in groups or clumps, naturalized in the sod, under trees, or in the rock garden, bed or border. Good drainage is essential; bulbs will grow poorly or rot if they are too wet.

Prepare beds by mixing fertilizer, or bonemeal and wood ashes, or other phosphorus and potassium sources into the soil below the level of the bulbs. Mix in compost to lighten heavy soils and increase nutrients. Peat is acidic—use with caution. Although widely available, Holland Bulb Booster contains ingredients which are not approved for organic growers.

Plant bulbs pointed side up; generally the depth of the hole is three times the bulb's height. See the chart on this page showing suggested planting depth and spacing. Topdress the bed with compost.

Mulch your bulbs with 4-6" of leaves, bark, straw, etc. after the ground freezes, especially if you plant them next to your house. Otherwise, basement heat and reflected sunlight will remove the insulating snow cover, exposing them to alternating sunny days and freezing nights, and damaging their growth tips. Wherever they're planted, bulbs need insulation. You need to mulch unless you can depend on winter to provide a consistent heavy snow cover that will last through a January thaw. A good mulch can also give protection up to half a hardiness zone, enabling you to experiment with bulbs not quite hardy in your zone.

Do not remove the mulch too early in the spring. By keeping the soil from thawing, mulch prevents heaving and false starts in early warm spells, and delays flowering slightly for a more uniform and longer-lasting display. Remove mulch as the bulbs begin to peek through in the spring, and dress the bed with compost.

Pinch the blooms as they fade to discourage seed production and to force the energy of the plant back into the bulb.

Do not cut the foliage as long as it remains green; it produces the food for future blooms. Cut leaves only after they yellow. Sidedress with fertilizer or compost in late summer to mid-fall.

If squirrels, chipmunks or moles are a problem, try chicken wire or sharp gravel placed in the ground surrounding the bulbs. (Blood meal also repels many critters, but it also repels some people and attracts dogs.) Or plant Narcissus, Allium, Fritillaria or Ipheion, which critters don't generally bother.

To disguise where we've recently been and disrupt squirrels' ability to "smell out" the bulbs in new plantings, we've begun dusting those areas with black pepper and ground cloves in the fall right after planting the bulbs and again in the spring when growth first emerges. The odor in the yard, reminiscent of pumpkin pie, is a neat touch too.

If after several years your bulbs produce leaves but not flowers, they may be suffering from overcrowding (dig in fall, separate and replant), insufficient sun (move to new location), undernourishment (sidedress thoroughly) or marginal zone hardiness (give to a friend further south).

Crocus provide a burst of color in early spring, and are great for naturalizing. Once established, they can spread by bulblets and seed in well-drained areas. Foliage of low-growing varieties fades before the grass needs mowing. One of the most popular genera of bulbs, they are colorful, long-lived, easy to grow, and welcome precursors of spring.

Hyacinth *Hyacinthus orientalis*

It's a bit hard to believe that 130 years ago hyacinths were more popular than either tulips or daffodils. An old Persian proverb says that if you have two loaves of bread, you should sell one to buy hyacinths. Their heady fragrance and range of color make them a favorite in the spring. The wafts of perfume from around the yard are wonderful—even passers-by notice the scent. For best showing year after year, plant bulbs deep in rich well-drained soil in full sun, and fertilize them each fall. After the first year, the florets are slightly smaller and not as dense. Grow them in the border in close bunches or meandering drifts. A natural compound in the bulbs can cause "hyacinth itch;" wash with cold water and plain soap after handling the bulbs. Z4-8, 8-12", ES. We're pleased to list three in **Jumbo** size for larger and more vigorous flowers. The rest are 16-17cm except where noted.

Iris, Greek goddess of the Rainbow, lends her name to this large genus of beautiful flowers with a wide range of sizes and colors. Superb for cutting and borders. Most prefer sun or dappled shade with moderately fertile well-drained soil. "Standards" are the three smaller erect petals; "falls" are the three larger pendant, reflexed or spreading petals. The "crest" or "signal" is the blaze of contrasting color on the fall.

Bulbous Iris fall into three groups: Reticulata, with netted bulbs; Juno, with fleshy roots on the bulbs; and Xiphium, with papery-covered bulbs. The Rhizomatous Irises we offer are all beardless; plant their rootstocks just below the soil level.

Narcissus thrives in full sun or dappled shade. Most pink and dark varieties hold their color better in semi-shade; bright sun fades them. Many white varieties need bright sun to mature their initial yellow or cream coloring to white. Pink and red varieties look best during cool wet springs.

Narcissus is the botanical name; daffodil and jonquil are common names that technically apply only to Divisions 1 and 7 respectively, though many people call them all daffodils.

Wonderful for beds, borders, cutflowers, forcing and naturalizing, they will return year after year as long as the soil is well drained and the foliage is not cut until it has completely died back. Water late varieties in mid spring during dry years to ensure bloom. Z3-8 (except where noted). Topsize bulbs (the largest available for each variety) except where described specifically as landscape size.

➢ **TRUMPET (DIV. 1)** - One flower per stem, and the trumpet, also known as the crown, corona or cup, is longer than the perianth, or petals. The classic Daffodil.

Miscellaneous Bulbs

is the name the Royal General Bulbgrowers Association in Holland gives to this large group of flowers. The expensive catalogs call them specialty bulbs; some call them minor or dwarf bulbs (even though some of the allia are huge!); Louise Beebe Wilder covers most of them in her 1936 *Adventures with Hardy Bulbs*. Whatever you call them, most are uncommonly sweet, delicate, colorful, and completely welcome in the spring.

Allium - Flowering Onion - Large genus characterized by small florets held in large or small, loose or tight umbels. Sweet-smelling blooms are great fresh cutflowers or dried for winter arrangements. Likes full sun and well-drained soil. Most repel pests, and only when crushed do they smell like onion.
Also see #**7411** Nectaroscordum.

➢ LOW-GROWING VARIETIES 6-16".

A. cæruleum - **Blue of the Heavens** - Syn. *A. azureum*. Gorgeous flax blue florets form 1½" dense umbel. Hardy variety from Siberia gradually forms large clumps. Leaves die back before flowering begins. Z3-8, 12-16", LS-SU. 5-6cm. ✦$✦

7001: 10/$4.20 *7002: 20/$7.00*
7003: 50/$16.50 *7004: 200/$56.00*

A. moly - **Lily Leek** or **Golden Garlic** - Formerly *A. luteum*. Bright yellow 2-3" umbel naturalizes easily in sunny borders, rock gardens, light woods and under shrubs. Produces many bulblets which mature quickly. Grows wild in southern Europe, and used for centuries as a talisman. Z3-8, 6-8", LS-SU. 5cm/up.

7011: 10/$2.40 *7012: 20/$4.00*
7013: 50/$9.50 *7014: 200/$31.00*

A. oreophilum - Formerly *A. ostrowskianum*. Bright fuchsia-rose florets with darker midribs, florets larger than most other allia. 2" umbel is lightly fragrant. One of the finest dwarfs. Z3-8, 8-10", LS. 4cm/up.

7021: 10/$2.40 *7022: 20/$4.00*
7023: 50/$9.50 *7024: 200/$32.00*

A. mix - Our own fragrant mix of three of the smaller allia, in rose *(A. oreophilum)*, blue *(A. cæruleum)* and yellow *(A. moly)*. All will spread in time. Z3-8, 6-16", LS. 4cm/up.

7031: 10/$2.90 *7032: 20/$4.75*
7033: 50/$11.00 *7034: 200/$37.00*

After each heading or description are USDA hardiness zones, approximate height at flowering time, relative bloom times (codes: VE, very early spring; ES, early spring; MS, mid-spring; LS, late spring; SU, summer), bulb size, and item numbers with quantities and prices. ✦$✦ indicates exceptionally good deal.

➢ MEDIUM-HEIGHT VARIETIES 24-36".

Garden Tulips

are wonderful massed or used as accents, colorful highlights of spring. Most varieties also good for cutting.

For many people, tulips are annuals to be removed and replaced yearly. Other gardeners dig their tulips in early summer after the foliage has died back, ripen the bulbs in a cool dry place, and replant in fall, a time-consuming process which increases the probability that the blooms will return.

You can take several simpler steps, optimizing the planting site, to encourage your tulips to come back. Choose a sunny location. Plant the bulbs deep enough (8-10" for most tulips) in well-drained soil, 3-4 weeks before the ground freezes. If you encounter heavy subsoil, plant the bulbs 4-6" deep and build up a bed on top. Tulips need 1/2-1" of rain during spring growth; water during drought. Deadhead tulips regularly to force the energy of the plant back into the bulb. Don't cut or tie the foliage until it has begun to yellow. Overplant with annuals or perennials to keep the soil dry during the summer. Z3-7. Topsize bulbs, 12cm/up except where we specify our new **Jumbo** listings.

Color Parade - A multi-colored gaggle of showy shorties strut their stuff early in the season. Pink, red, yellow and white Kaufmanniana and Greigii tulips, both solids and bicolors, singles and multiflorals with lots of variegated foliage. 8-12".
